Conditions d'utilisations : SUPINFO International University vous permet de partager ce document. Vous êtes libre de :

- Partager — reproduire, distribuer et communiquer ce document
- Remixeur — modifier ce document

A condition de respecter les règles suivantes :

Indication obligatoire de la paternité — Vous devez obligatoirement préciser l'origine « SUPINFO » du document au début de celui-ci de la même manière qu'indiqué par SUPINFO International University – Notamment en laissant obligatoirement la première et la dernière page du document, mais pas d'une manière qui suggérerait que SUPINFO International University vous soutiennent ou approuvent votre utilisation du document, surtout si vous le modifiez. Dans ce dernier cas, il vous faudra obligatoirement supprimer le texte « SUPINFO Official Document » en tête de page et préciser notamment la page indiquant votre identité et les modifications principales apportées.

En dehors de ces dispositions, aucune autre modification de la première et de la dernière page du document n'est autorisée.

NOTE IMPORTANTE : Ce document est mis à disposition selon le contrat CC-BY-NC-SA Creative Commons disponible en ligne <http://creativecommons.org/licenses> ou par courrier postal à Creative Commons, 171 Second Street, Suite 300, San Francisco, California 94105, USA modifié en ce sens que la première et la dernière page du document ne peuvent être supprimées en cas de reproduction, distribution, communication ou modification. Vous pouvez donc reproduire, remixer, arranger et adapter ce document à des fins non commerciales tant que vous respectez les règles de paternité et que les nouveaux documents sont protégés selon des termes identiques. Les autorisations au-delà du champ de cette licence peuvent être obtenues à support@supinfo.com.

1 OBJECTIVES

This project is a research project that will help you improving your programming skills and more specifically your Cocoa/UIKit fluency.

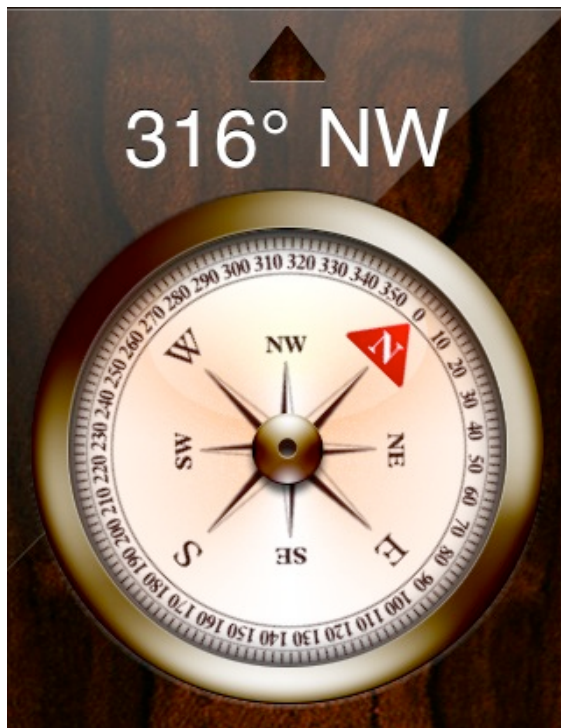

Here is a non-limitative list of skills and areas involved:

- Connectivity
- Location API
- Data gathering

2 THE PROJECT

In this project, you'll write an iOS application. If you can't run the OS X virtual machine and thus can't access a working development environment you can, **with the explicit acknowledgment of your trainer**, do the exact same project using the regular Cocoa toolkit (NSApplication/NSView/...) instead of Cocoa touch. The first virtual machine running GNUStep provides such an environment.

Campus Compass is an application that shows the current bearing and distance to the nearest SUPINFO Campus in a Compass-like fashion:

Instead of tracking north, it will track the nearest SUPINFO Campus.

2.1 APPLICATION FEATURES

The application must show a compass-like interface with a rotating indicator. Graphic quality is not part of the evaluation. You're free to use any images you want or just go with Paint-like drawings. Only the feature is important.

The application must retrieve the campus list and addresses from supinfo.com and lookup GPS coordinates from that list.

During the tracking, the application must show the campus name it's pointing to along with distance and bearing.

3 CONDITIONS AND DELIVERY

This project is individual. Teamwork is **strictly prohibited**. Failure to comply with these rules will result in a **0/20 mark** for **all students** delivering the **same work**.

You have to deliver the following items to your local trainer:

- Application code
- XCode project

If you've created a GNUStep Application, you'll have to deliver:

- Application code
- ProjectCenter project
- Demo binary that runs on the virtual machine

4 DEADLINE

You must have sent items from section 3 to your local trainer by the **06 of April 2015, 23h59 GMT+1**.

If your local administration gives you a different deadline, it will take precedence on the here above.

5 GRADED ITEMS

| Item | Point |
|---|-------|
| The applications shows a compass-like interface | 4 |
| The compass reacts to the user position/bearing relative to the nearest Campus | 5 |
| The application can retrieve campus list and addresses from supinfo.com | 6 |
| The application can geolocate campuses (GPS coordinates) from grabbed addresses | 5 |
| Total | 20 |
